

Choice Board for School Ageds (Ages 7-10)

Baking: Get in the kitchen and follow a recipe to bake something simple like cookies or muffins that requires measuring out ingredients.

Board Games: Play a board game together. Dice games and board games that use money are perfect (Eg. *Monopoly*, *Pay Day*, *Game Of Life*.) Try a classic card game that requires tracking a score.

Pattern Hunt: Go on a pattern hunt or shape/3D solid hunt around the house. Find and record or draw as many patterns or examples of a target shape/solid as you can find on a piece of paper folded up into eighths.

Surveys: Create a survey question to ask family members and friends. Think of 4 or 5 possible answers. Then call or e-mail the question to your friends and family, gather the results, and create a graph to show results. Report your results to everyone who took part.

Nature Patterns: Print off the nature's patterns printable on *OneTimeThrough*, go outside, and try to complete and extend the patterns. Use natural objects to create your own patterns!

3D Solids: Search the house for different 3D solids like spheres, cylinders, rectangular prisms, cubes, pyramids and triangular prisms. See how many you can find of each. If you can find boxes for the different solids, try taking them apart and looking at their pattern or "net." Try to create a net for a cube or other solid.

Calculator Games: Try out a new game using calculators. Find a link to games on *OneTimeThrough*.
